# Rebus® Global Inventory Management

## Improved fulfillment that safeguards your brand.

*"Before Rebus, each one of these pieces would have to be an individual lookup by an employee. Now it is an immediate glance to what is left for the day, along with what is left to release, updating every 2 minutes."*

Head of North American Warehousing, Global Food Manufacturing Company

**rebus.io**

**Rebus Global Inventory Management provides protection from massive financial risk with improved inventory fulfillment and traceability.**

**With the push of a button, update inventory statuses and create status changes across your entire distribution network – anywhere, anytime.**

### Real-Time Visibility into Inventory

**Reduce visibility from hours to minutes**

Rebus helps make the most of your inventory. It aggregates data across sites, WMS systems, nomenclatures, and products lines to provide a complete snapshot of your inventory in real-time. Teams have access to inventory by status in real-time and can manage their processes, people, and products to ensure they are maximizing fulfillment.

### Control Inventory, No Matter Where It Is

**Holistic view of inventory across entire network**

Rebus helps teams even when things don't go according to plan. Warehouses need total visibility to ensure product is flowing smoothly through the supply chain, but need traceability for when it isn't. Be able to drill down to a specific batch and know exactly where in the supply chain it is. Move away from manual tracking and spreadsheets to total control in real-time.

### Optimize Inventory to Consistently Meet Quality Standards

**Move from spreadsheets to real-time control**

Rebus provides teams with a magic wand. Easily change the status of inventory and have it updated across all systems while creating a realtime feedback loop to ensure that all data across WMS systems and ERPs are consistent. This streamlined quality assurance process reduces risk, time, and wasted inventory.

*"Rebus solved in 2 weeks what internal teams had been trying to solve for over 2 years."*

Industry-Leading Global Food Manufacturer
