Rebus® Warehouse Maps

Switch from data lists to dynamic visual maps

Rebus Warehouse Maps helps warehouse operators improve operational efficiency. See a real-time visual representation of what your pick frequency looks like throughout your warehouse with real-time data. Find and reduce bottlenecks by optimizing your space utilization and reducing congestion in heavy traffic areas. Warehouse Maps uses real-time and historical data analysis to help optimize warehouse layout and improve space utilization so you can improve productivity.

rebus.io

Warehouse Maps provides a detailed visual representation of your entire warehouse. By highlighting inefficiencies and streamlining operations, it enhances productivity, reduces pick time, and accelerates order fulfillment. This tool transforms warehouse management, ensuring efficient storage and smooth workflow.

Enhanced Planning and Space Utilization

With a real-time visual representation of your entire warehouse, you are able to understand how you're utilizing your space, track your warehouse capacity, and get count information. Rebus Warehouse Maps pulls the data from your WMS in real-time and lays it all out in an easy-to-see visual format.

Improved Pick Path Optimization

Warehouse Maps displays your aisles and the number of picks by hour, denoted with specific time intervals. This allows warehouse managers to get a real-time snapshot of pick volumes at different times of the day. If the pick volume is too high, it will usually be highlighted in red, indicating the need for adjustment to improve efficiency.

With this clear visual representation of what's happening, you can quickly and efficiently monitor picks without the need to sift through large amounts of data, enabling more immediate and effective decision-making.

Flexible Yard Management

Warehouse Maps is flexible enough that you can use it to manage what is happening outside of your warehouse, too. From knowing which dock doors are in use to knowing where trailers are in your yard and how long they've been in that location, you can rest easy knowing that the same real-time data you have from Rebus inside your warehouse is also available for your yard.

Rebus helps us make sure we are putting our efforts into improving processes and investing in technology, we are getting the returns in the right areas and it's driving the best results

Ryan Donoghue, Director of Operations & Continuous Improvement, Accuristix
